CASE 62:

Ms. Chen is a 62 years old woman. She is coming in for numbness and deviation of the mouth for the last four days. It began shortly after she was hospitalized for secondary hypertension which was stabilized by medication. Her CT scan was normal and she was diagnosed with Bell's Palsy. She has Type II Diabetes Mellitus and is overweight. Her blood pressure is 180 / 116.

She has a pale, dusky tongue with a white, greasy coating. Her pulse is soggy and choppy.

CASE 63:

Annie Jin is a 14 years old girl. She breaks out in hives on her legs any time she goes swimming in cold water, or in the winter time, when she walks to school. She goes to a private school and wears a uniform with knee high socks and a skirt, it is just the area between the socks and the skirt that erupt in hives. She doesn't have hives at the moment, but says when they come, they are light whitish-red and without pain. They go away as soon as she gets warm, without leaving a mark. She has had this condition since she was 8 years old. She has a very pale face and very low energy. She recently was tested positive for anemia, her hemoglobin levels are 90 g/L.

She has a pale tongue with a white, sticky tongue coating. Her pulse is soggy.

CASE 64:

Mr. Cousins is a 48-year-old man. Today, he has begun to have a rapidly spreading, bright red rash on his lateral lower leg. The rash is clearly demarcated. He says he has no idea what caused it. He also feels hot with an aversion to cold. His oral temperature is 39 degrees. His blood pressure is 128/86. He mentions that he did receive a hit to his leg during soccer practice the other day, from another player's cleat. However, there wasn't much damage, only a slight cut.

His tongue is red with a thin white coating. He has a floating and rapid pulse.

CASE 65:

Adrienne Chou is a 26 years old woman who works as a waitress and is a full time student. One week ago, she developed a terrible skin rash that came on suddenly and is characterized by skin eruptions that are red and ooze yellow pus. The rash runs from her neck down her arm. Adrienne is in a lot of pain. She was seeing another practitioner last week who stopped treating her because the eruptions were soiling the clinic sheets. Her other symptoms include severe irritability, bitter taste in the mouth, red eyes and constipation.

She has a red tongue yellow, sticky tongue coating. She has a rapid, wiry and slippery pulse.

CASE 66:

Alina Kwok is 19 years old. She has just moved to Canada to attend university. Since moving, she has begun having breakouts of pimples on her face - especially her forehead and cheeks. The pimples are red in colour with a white-yellow pustule. She tells you that she has changed her diet. She eats out a lot - lots of hot and spicy foods, fast foods, and drinks a lot of alcohol late at night. She has also been eating her favourite meal of curry lamb.

She has a red tongue with a yellow, greasy coating. Her pulse is slippery and rapid.

CASE 71:

Kira was in a car accident three weeks ago. She was hit directly on the side of her car at high speed. Kira was rushed to the hospital. She lost a lot of blood before the doctors were able to stabilize her. Now she is suffering from terrible neck pain that has a stabbing quality to it. The pain is constant and worse at night when she is trying to sleep. The area of pain runs from C1 to C7. Kira had x-rays done of the area after the accident. The exam results were negative for nerve and bone damage. Before starting treatment, you read Kira's intake form and learn that she is taking blood thinners.

She has a swollen and purple tongue and the pulse is wiry and choppy.

Q: What is the disease category?

Q: What are 4 points you would use for this case?

Q: You decided to use moving cups as part of your treatment. What is the treatment principle for this case?

Q: What are 2 benefits and 2 risks of moving cups?

Case 72:

Naomi is 54 years old and has been experiencing chest pain for the past 2 – 3 weeks. The pain is worse with exertion and worse with fatigue. She says she experiences it as a tightening sensation in her chest. Other symptoms include: pale face, lower back pain, feelings of cold. She also has pale lips.

Q: What is the disease category for this case?

Q: What is the differential diagnosis for this case?

Q: What is the pathogenesis of the pale face?

Q: What 5 points would you use for this patient?

Q: This patient faints during treatment. What are three possible symptoms of her fainting spell?

Q: Naomi comes back to the clinic after two weeks experiencing more pain, breathlessness and is sweating. What is this related to in Western Biomedicine and what do you do?

LEADERS IN ACUPUNCTURE BOARD REVIEW

Case 73:

Angela is an insomniac. It started a few years back when she was dealing with a lot of family issues. Her mother was diagnosed with Parkinson's. Her father was diagnosed with stage 4 Lung cancer and she was going through a divorce. Angela goes to bed at 11pm every night but doesn't fall asleep until 12am or even 1am if the insomnia is very bad. She wakes up every two hours and it takes her a good 30 minutes to fall back to sleep. This leaves her feeling very tired during the day. She's not able to function and the lack of sleep is affecting her ability to perform her job. She has a lot of fear and anxiety that really ramps up right before bed time. Ironically, she sleep very well on vacation.

Her tongue is pale, slightly red with a dry and geographic coat. The pulse is thready, choppy and rapid.

Q: What is the disease category?

Q: What is the differential diagnosis?

Q: What two points do you use to treat the root problem?

Q: What two points do you use to treat the chief complaint?

Q: What lifestyle recommendations do you give to Angela?

LEADERS IN ACUPUNCTURE BOARD REVIEW

Case 74:

Chrissy is 36 years old. She stays at home and cares for her 4 children that range in age from 6 – 6 years old. Chrissy complains of breathlessness. She dislikes talking and speaks in a low voice. She says she feels exhausted from talking. Her exhaustion is worse after she has to do any physical or mental activity. With 4 kids she is often doing physical work keeping up with the kids. Her appetite is not so good and she says she often has a dull pain in her abdomen that feels better with heat. She bloats after she eats. She says her lower back and lower limbs also feels cold. She also has dull pain in her lower back and sleep with a heating pad on it. She wants to sleep all the time. Chrissy is still breast feeding and tells you that she is actually breastfeeding all her children still.

Her tongue is very pale and wet. Her pulse is thready and weak.

Q: What is the differential diagnosis for this case?

Q: You do moxa at ST36. What is the treatment principle for this case?

Q: What is the pathogenesis for the breathlessness?

Q: What 4 points will you use to treat the root and what 2 points will you use for the branch?

Q: You advise Chrissy that breastfeeding might not be the best thing to do right now but she insists on breastfeeding all 4 of her children. What do you do?

LEADERS IN ACUPUNCTURE BOARD REVIEW

Case 75:

Ben complains of severe stabbing pain in his abdomen that is worse upon pressure. Ben is an alcoholic and trying to stop drinking. He has been off and on homeless over the past decade. His childhood was turbulent. His parents split up when he was 4 years old. His mother committed suicide when he was 9 years old at which point he went back to live with his father. His father was very physically abusive to Ben until Ben was 15 years old. That is when he ran away and started living on the streets.

Ben is very stressed about his current situation. He says he can't remember a time when life wasn't stressful for him. He drinks alcohol so he doesn't have to deal with his problems. Ben suffers from rage himself and is very easily angered. Other symptoms include vomiting of food and blood, black stools, hypochondrial distension and pain and irritability.

His tongue is purple and his pulse is choppy and wiry.

Q: What is the disease category?

Q: What is the differential diagnosis?

Q: What points would you use for vomiting blood?

Q: What 2 points would you use to treat the root?

Q: The patient asks to have receipt with the name left blank. How do you issue the receipt?

Q: What lifestyle recommendations do you have for Ben?

LEADERS IN ACUPUNCTURE BOARD REVIEW

Case 76:

Tim Gogan is a 26 year-old-man. He has been having severe low back pain for the last three months, after lifting heavy boxes at work. The pain begun in the central area of his spine and has begun to travel down the back and lateral side of his left leg. It is worse throughout the night and immediately after waking in the morning. After going to the emergency department at the hospital for pain multiple times, he recently had an MRI. It showed spinal disc herniation at L5/S1. Other than this pain, he feels fairly normal.

He has a light red tongue with a thin white coating. He has a wiry pulse.

Q: What is the disease differentiation?

Q: What is the treatment principle?

Q: Why is the pain worse at night and first thing upon waking?

Q: What four acupuncture points could you use and needling method?

Q: What four ear acupuncture points would you use?

LEADERS IN ACUPUNCTURE BOARD REVIEW

CASE 77:
